MARKET COMMENTARY

December saw slightly increased volatility as financial markets behaved in a 'risk on' manner despite uncertain economic conditions – exacerbated by data limitations following the US government shutdown. Global bond yields rose sharply while credit spreads were more resilient and equities moved higher. Central banks worldwide navigated challenging inflation data, with the Federal Reserve delivering a 25bp cut amid dissenting voices and concerns around upcoming nominations. Elsewhere the ECB remained on hold while the Bank of Japan raised its policy rate to 0.75%.

Domestic bond yields continued to sell off through December in line with the broader global trend and reflecting the increasingly hawkish monetary policy outlook. This upward pressure was fuelled by robust household spending and a notable rebound in private investment growth. As inflation concerns mounted, market participants began to fully price in a rate hike by year-end 2026, with RBA Governor Bullock signalling readiness to tighten policy should inflation remain elevated. By mid-December, expectations for a February rate increase gained traction. The latest RBA minutes revealed a divided board, with some members viewing monetary conditions as no longer restrictive, while others maintained a more cautious stance.

Domestic credit spreads traded in a tight range throughout December tightening very marginally on aggregate. Robust US economic data alongside better than expected domestic consumer spending were supportive. Spreads remain tight relative to historical levels and credit fundamentals are supportive reflecting accommodative liquidity conditions and conservative corporate balance sheets.

December concluded a record year for issuance volumes in the Australian credit market. While the latter half of the month was affected by the seasonal shutdown, a number of new corporate deals were priced in the first week of the month. NatWest's \$1B senior deal reflected the trend towards elevated kangaroo financial issuance that has been observed throughout 2025. Ausgrid came to market for \$750M across 5 and 10-year fixed rate tranches while Dexus raised \$500M in subordinated paper. Securitisation markets continued in earnest, with issuance stretching into the second week of December before primary markets closed for the year.

PORTFOLIO COMMENTARY

The Fund's yield premium above benchmark remained the most substantial contributing factor to outperformance over the month, led by allocation to securitised sectors and domestic banks. The portfolio running yield at month end was 4.6%, with the average credit spread measured at 0.8%.

Credit spread contraction contributed marginally to relative performance during a month where credit spreads traded in a relatively tight range. Allocation to domestic banks was constructive while securitised spreads widened marginally, detracting from performance.

The Manager remained very selective in adding new issues to the portfolio during a quiet month for primary issuance. The Fund's ABS exposure was increased via a new automotive securitisation.

The outlook improved over the month to end the year in neutral territory. The Fund maintains its defensive positioning supported by a relatively short credit duration and limited exposure to subordinated paper. The Fund retains the capacity to take advantage of relative value opportunities as the outlook continues to improve.

OUTLOOK

The credit outlook improved over December returning to a neutral reading by year end.

Valuation indicators worsened slightly, reflecting swap to bond spreads which moved further negative in mid-December. Opportunistic issuance and domestic vs offshore spreads remain balanced while US investment grade and high yield and domestic investment grade spreads are neutral despite remaining near the bottom of their historical fair value range.

The macroeconomic outlook improved over the month. While soft global growth expectations continue to weigh slightly on the outlook, the ratio of upgrades to downgrades has entered positive territory. The credit rating outlook is benign with market participants anticipating further upgrades in 2026.

Supply and demand indicators improved marginally to neutral. Upcoming maturity volumes have normalised while elevated recent issuance volumes continue to detract from the outlook. market demand remained resilient into year end.

Technical indicators improved to marginally positive reflecting supportive US credit, equity and equity volatility indicators. Cash balances among real money accounts are neutral while intermediary positioning is conservative.
