Investment approach

A multi-manager framework is utilised, where specialist investment managers are selected to form a diverse and complementary mix of investment strategies and styles. This can help reduce volatility by avoiding over exposure to a particular specialist investment manager. Derivatives may be used in managing the portfolio.

Investment strategy

The portfolio combines managers who apply either a bottom-up fundamental stock picking or quantitative approach to security selection, have a repeatable investment process, work within appropriate risk management frameworks, operate in an aligned and stable organisational structure, and have a performance track record that is consistent with their style and approach. We believe combining these characteristics positions the portfolio to best deliver a stable outcome within a multi-manager framework.

The Implemented International Share Portfolio combines managers who operate across all industry sectors and geographic regions, including both developed and emerging markets. All managers within the portfolio play a specific role, despite individually managing appropriately diversified portfolios. The portfolio is diversified in a range of ways including by market capitalisation (small, mid, and large cap), investment style (value, growth, quality, or a combination) and investment approach (fundamental or quantitative). The overarching characteristic of the managers within the portfolio is a modest bias towards 'quality', embodying our 'protect and grow' investment philosophy. The portfolio blends the above-mentioned group of managers targeting a portfolio that combines investment styles, market capitalisation biases, and other characteristics in a way that complements each other, and should over time deliver a well-balanced, consistent performance outcome. The end result is the creation of a portfolio that aims to have an overall volatility below that of the broader benchmark, while exhibiting a modest level of tracking error.
