Investment approach

A multi-manager framework is utilised, where specialist investment managers are selected to form a diverse and complementary mix of investment strategies and styles. This can help reduce volatility by avoiding over exposure to a particular specialist investment manager. Derivatives may be used in managing the portfolio.

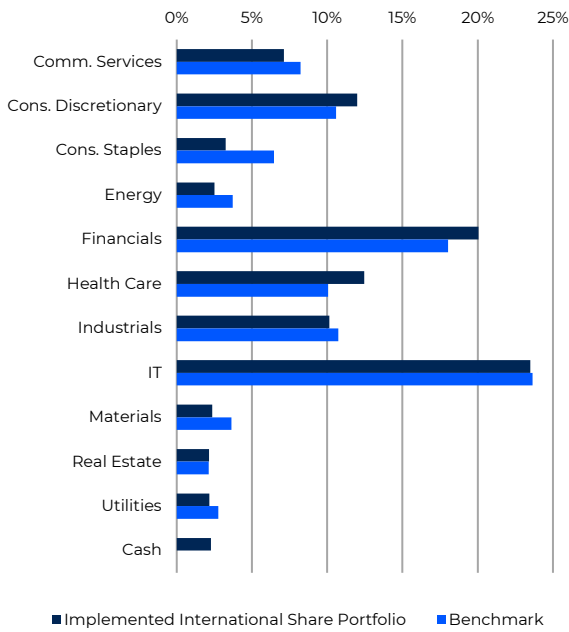

Investment strategy

The portfolio combines managers who apply either a bottom-up fundamental stock picking or quantitative approach to security selection, have a repeatable investment process, work within appropriate risk management frameworks, operate in an aligned and stable organisational structure, and have a performance track record that is consistent with their style and approach. We believe combining these characteristics positions the portfolio to best deliver a stable outcome within a multi-manager framework.

The Implemented International Share Portfolio combines managers who operate across all industry sectors and geographic regions, including both developed and emerging markets. All managers within the portfolio play a specific role, despite individually managing appropriately diversified portfolios. The portfolio is diversified in a range of ways including by market capitalisation (small, mid, and large cap), investment style (value, growth, quality, or a combination). The overarching characteristic of the managers within the portfolio is a modest bias towards 'quality', embodying our 'protect and grow' investment philosophy. Excluding the Global Small Cap manager, each manager runs relatively high conviction portfolios. Our more concentrated managers manage portfolios of between 20 and 45 securities, while more diversified managers typically manage portfolios of between 50 and 70 securities. The portfolio blends the above-mentioned group of managers targeting a portfolio that combines investment styles, market capitalisation biases, and other characteristics in a way that complements each other, and should over time deliver a well-balanced, consistent performance outcome. The end result is the creation of a portfolio that aims to have an overall volatility below that of the broader benchmark, while exhibiting a modest level of tracking error.
