## MARKET COMMENTARY

April was marked by significant volatility in global financial markets, primarily driven by the announcement of 'Liberation Day' tariffs by US President Trump. The announcement led to a surge in volatility with US equities entering correction territory and equity volatility reaching levels previously seen during the global financial crisis. Sentiment improved later in the month following the announcement of exemptions and the relief rally saw Australian equities end the month higher while US equities were down slightly.

Bond markets also experienced significant movements in April. Domestic bond yields ended the month lower and the yield curve steepened throughout the month as short end yields outperformed. The RBA left cash rates unchanged during April, acknowledging the 'continuing decline in inflation' and highlighting that noting that the labour market 'might not be quite as tight' as previously identified. Futures markets moved to price in a May rate cut and a further 75bps of cuts in the next 12 months, recognizing easing inflation concerns and global economic uncertainty. US bonds saw greater volatility with an early April rally giving way to a sharp spike in long term bond yields driven by technical factors and concerns around demand for treasuries, before rallying again to end the month lower.

Credit spreads ended April wider following a month of increased volatility and uncertainty in global markets. The Australian iTraxx index traded in a wide range, selling off in the first half of the month before moderating to end 5 bps wider at month end. Cash spreads also widened over the month with higher beta segments – including subordinated and high yield credit moving sharply wider in the wake of the liberation day tariff announcements. Semi-government and supranational spreads were more resilient, with semi's ending the month marginally tighter.

Primary market activity was materially reduced in April as uncertainty following the US Tariff announcements and associated volatility gave way to holiday shortened weeks in the second half of the month. A small number of securitisation, government adjacent and short dated deals priced during April with the only corporate issuance of note being a 7-year \$600M fixed rate bond from Sydney Airport.

## PORTFOLIO COMMENTARY

Credit spread expansion was the most substantial determining factor during the month, detracting from performance. Credit sold off sharply in early April before spread expansion moderated and began to retrace over the second half of the month. The Fund's allocation to securitised sector and financial were the most significant detractors while non-financial corporates were more resilient. More acute spread expansion among high beta positions including offshore bank subordinated debt impacted relative return. Exposure to USD denominated subordinated and hybrid bank debt also detracted as USD spreads moved wider.

The Fund's yield premium above benchmark remains a key contributor to performance, partially mitigating the impact of elevated spread volatility during April. The Fund's yield advantage is led by allocation to securitised assets and subordinated financials. The portfolio's running yield was 5.6% at month end, with the spread (credit yield premium) measured at 1.6%.

The Manger was active in secondary markets during the month, taking the opportunity to adjust sector and risk allocations. The Fund's exposure to RMBS, non-conforming RMBS and CMBS was reduced in early April. The Fund's allocation to subordinated debt was reduced over the month – as the manager trimmed RMBS exposure – while senior and hybrid debt exposures were selectively increased. Meanwhile, the manager took advantage of the recent volatility in US credit markets to add attractively priced USD denominated major bank subordinated paper. The Fund's cash allocation was elevated at month end in recognition of increased liquidity concerns.

The outlook for credit remains negative and the Fund continues to maintain a defensive posture. The Fund retains a conservative liquidity profile with an elevated allocation to cash to mitigate the impact of reduced market liquidity while providing ample dry powder to take advantage of relative value opportunities presented by market volatility. The Manager continues to look for attractively priced issues and relative value opportunities while carefully managing credit and liquidity risks.

## OUTLOOK

The credit outlook remains challenging with negative readings throughout the Month. The outlook score initially turned Negative in early March well in advance of the volatility observed in early April.

Valuation indicators improved marginally to neutral. Elevated volatility saw investment grade indicators shift with US IG improving to positive before moderating in late April while Australia investment grade are wide of recent levels and are offering attractive relative value. AU swap spreads remain very tight

The growth outlook is marginally negative. Macroeconomic growth indicators are negative, led by the worsening outlook for US growth, potentially exacerbated by the restrictive tariff regime.

Supply and demand indicators improved during the month while remaining marginally negative. The volume of upcoming maturities is elevated, however market demand has softened and the pipeline for upcoming deals has increased, weighing on the outlook.

Technical indicators remain negative with intermediary positioning worsening over the month while US credit, equity and equity volatility indicators all remain in negative territory.
