

Perpetual Investment Funds

PERPETUAL DIVERSIFIED REAL RETURN

31 August 2026

FUND FACTS

Investment objective: Aims to target a pre-tax return of 5% per annum above inflation (before fees and taxes) over rolling five-year periods, while minimising downside risk over rolling two-year periods.

Management Fee 1.10% pa**

Suggested minimum investment period: Five years or longer
*Refer to PDS for Management Costs.

^Management Fee for Super and Pension is 0.85%.

TOTAL RETURNS % (AFTER FEES) AS AT 31 AUGUST 2026

FUND PERFORMANCE

The Diversified Real Return Fund returned 0.5% (gross) in August. Over the past year, the Fund has returned 7.9% (gross), and over the past five years, the Fund has returned 5.2% (gross) per annum compared with the objective of 9.7% (CPI plus 5%*) over rolling five-year periods. Since inception (in 2010), the Fund has returned 6.6% (gross) per annum compared with the objective of 8.0% (CPI plus 5%*).

Allocation to Australian and global equity beta were the key contributing factors to performance over the month, supplemented by stock selection within Australian Equities and allocation to the JO Hambro UK Equity Income strategy. Underweight exposure to domestic major banks was supportive as the sector softened in spite of resilient earnings, reflecting softening housing markets and the prospect of higher for longer domestic rates. Within alternatives, allocations to metals, soft commodities and sustainable listed infrastructure LICs all contributed.

The Fund's exposure to inflation linked bonds as well as domestic property detracted from performance as bond yields rose. The Fund's US Dollar exposure also faced headwinds as the Greenback continued its decline driven by strong jobs data.

*Monthly CPI indicator measured and published by the ABS as at 31 July 2026

MARKET COMMENTARY

Global equity markets extended their advance through August even as government bond yields came under renewed pressure. Equity investors focused on strong corporate earnings and evidence that investment in artificial intelligence is translating into broader business spending. Government bond yields rose in major markets, with Australian, UK and US 10-year yields all pushing towards 15-year highs, as markets grappled with rising fiscal deficits, sticky inflation and the inflationary implications of a looming AI-driven data-centre investment boom.

- Global equities (+2.4%) and US equities (+2.7%) rallied, with gains evenly spread between the value and growth gauges (the MSCI World Value index and MSCI World Growth index were both up +2.4%).
- Japanese equities were among the strongest performers, with the Nikkei 225 (+3.1%) extending its exceptional 2026 gains, supported by a weaker Yen and the ongoing strength in semiconductor and other AI supply chain names.
- European equities were solid (Eurostoxx 50 index rose +1.0% which was its fifth consecutive monthly gain) but trailed the broader market as strong earnings were offset by a hawkish ECB tone and rising bond yields.
- UK equities also lagged, with the FTSE 100 (+0.2%) relatively flat even though the index has recorded seven monthly gains in 2026YTD. In August UK 10-year gilt yields pushed above 5% for the first time since 2008.
- Australian shares were resilient through a volatile reporting season, with the ASX 300 (+1.6%) extending its run of monthly gains, led by small caps, even as the Reserve Bank held rates steady and bond yields rose.
- Emerging markets were mixed (+1.9%) with markets exposed to AI supply chain including the TAIEX (+7.1%) and KOSPI 200 index (+2.5%) bouncing from losses in July, which helped both markets to outperform Chinese equities (1.0%).
- Gold recorded its strongest monthly rise since January 2026 (+10.1%), as the resurgence of Middle East hostilities and continued central bank buying amplified the effect of the global duration selloff as investors sought alternative diversifiers.
- Government bond yields rose broadly across major markets. The US 10-year yield rose to 4.75% (highest level since January 2025) as investors became increasingly concerned about stubborn core inflation and the US Fed's reaction function. Yields in similar markets such as Australian & UK also experienced upward pressure on long-dated yields.

Geopolitical developments remained an important market theme throughout August. Oil prices initially eased through the first half of August on hopes of a durable US-Iran agreement to reopen shipping through the Strait of Hormuz, before reversing sharply as diplomatic efforts broke down and direct exchanges of fire between US and Iranian forces resumed in the final week of the month. The persistent risk of supply disruption continues to warrant a geopolitical risk premium in energy markets, though limited pass-through to broader inflation have so far allowed most central banks to remain patient, although September is shaping up as a month in which rates are expected to rise in both Japan and Europe, and potentially Australia.

The inflationary impact of higher energy and input costs saw monetary policy expectations shift over the month with markets increasingly pricing in further US Fed and RBA rate hikes. Fed Chair Warsh's Jackson Hole address in late August again offered no explicit forward guidance but reiterated the FOMC's discomfort with inflation running persistently above target, and markets have since increased the probability assigned to a September rate hike. The Reserve Bank of Australia left the cash rate unchanged at 4.35%, but stronger-than-expected July inflation and persistent capacity pressures increased market expectations of further tightening.

Following the coordinated intervention by U.S. and Japanese authorities to support the yen, U.S. Treasury Secretary Scott Bessent announced plans to significantly increase purchases of long-dated Treasury securities through an expanded buyback program as U.S. yields climbed to their highest level in nearly two decades. While framed as a measure to enhance market liquidity, the move reignited discussion around the sustainability of U.S. fiscal deficits and the longer-term outlook for the U.S. dollar.

US corporate earnings remained a key source of support, with the Q2'26 reporting season confirming very broad-based profit growth well in excess of nominal GDP growth across most sectors, while European and Japanese reporting seasons also tracked ahead of expectations. In the United States, earnings strength was concentrated in AI and energy, but there were also signs of improvement across aerospace and defence, luxury goods, personal care and medical equipment. The broader earnings profile is supportive for the Fund's bias towards a wider set of value-oriented, geographically diversified opportunities.

Within Australia, the economic picture was mixed. Nominal consumer spending remained solid, but real spending was subdued as sentiment stayed weak, unemployment edged higher and wages growth eased. Housing activity also softened, with major banks reporting declining mortgage applications. Against this backdrop, attention increasingly turned to the scale of Australia's coming AI-driven data-centre investment cycle, conservatively estimated at over \$110bn over the next four years. Arriving into an economy already with a positive output gap and already-binding construction capacity in Queensland and Western Australia, which risks the investment boom crowding out spending in other sectors such as property, rather than expanding growth—a dynamic reminiscent of the 2010-12 mining boom—reinforcing the case for a higher-for-longer Reserve Bank cash rate and a firmer Australian dollar.

The outlook for markets remains finely balanced, with resilient global growth and earnings momentum offset by stretched valuations, elevated government bond issuance, higher bond yields and a rising risk premium attached to long-dated sovereign debt. Government bonds continue to offer diminished diversification benefits as yields rise in tandem with equities, reinforcing the importance of the Fund's alternative sources of portfolio protection. The Fund retains multiple embedded risk protections and sources of portfolio convexity. As always, our focus remains on identifying investments that can generate returns of CPI plus 5% per annum over a five-year horizon while maintaining an asset allocation that ensures no individual position, or cluster of positions, risks the medium-term investment objective.

CURRENT POSITIONING

Global equity markets continue to be characterised by elevated valuations, concentrated index leadership and strong retail participation, particularly in the United States. While the investment opportunity set remains narrower than usual in the largest benchmark indices, recent reporting seasons have provided encouraging evidence that earnings growth is broadening beyond a handful of mega-cap companies. Europe and Japan are increasingly contributing to global profit growth, while a growing proportion of US companies are participating in the earnings expansion, supporting a more constructive medium-term outlook for risk assets.

Against this backdrop, the Fund retains its preference for attractively valued and cash-generative equity exposures, including Global Deep Value and UK Equity Income strategies. These allocations targeting undervalued, cash-generative companies that are overlooked by passive flows and whose returns are not reliant on further valuation expansion to deliver returns of CPI plus 5% per annum. These holdings trade at a material discount to global benchmarks and provide genuine geographic diversification, including a substantial overweight to the UK and a large underweight to expensive US mega-cap technology.

Recent months have also seen the establishment of a position that is long equal-weight S&P 500 futures and short capitalisation-weighted S&P 500 futures. This position reflects our view that earnings participation across US companies is broadening and that market returns may continue to extend beyond the largest AI-related names. Should the recent improvement in market breadth persist, the position has the potential to benefit from a wider distribution of equity market returns.

While cyclical signals have improved, the Fund continues to manage downside risks by maintaining little or no exposure to the most expensive parts of the global equity and credit markets. We also have zero exposure to private markets given their liquidity and valuation risks, where a left-tail event could spark vulnerabilities and contagion. The Fund complements this with option protection where it has been attractively priced to implement. This includes cost-effective, layered S&P 500 put structures that risk only a low single-digit basis-point premium while delivering asymmetric protection across shallow, moderate and deep drawdown scenarios without requiring precise market timing.

Within the defensive component of the portfolio, fixed income allocations remain concentrated toward the shorter end of the US yield curve. Short-dated government bonds continue to offer attractive carry while exhibiting less sensitivity to inflation surprises and fiscal uncertainty than longer-duration bonds. This positioning seeks to provide diversification benefits during periods of market stress without materially increasing exposure to duration-related risks.

The Fund also maintains a meaningful allocation to inflation-sensitive assets. Structural drivers including deglobalisation, rising fiscal spending, geopolitical tensions, energy security initiatives and ongoing supply-side constraints suggest that inflation may remain more volatile than experienced during the decade prior to the pandemic. To address this risk, the portfolio retains exposure to a diversified basket of commodities and Australian inflation-linked bonds. At current yields, inflation-linked bonds provide a combination of real income, sovereign credit quality, inflation protection and liquidity, making them an attractive defensive anchor within the broader portfolio.

Overall, the Fund remains positioned for a world where valuations matter, inflation remains structurally higher than in the pre-pandemic era, and market leadership continues to broaden beyond a narrow group of mega-cap stocks. We believe a combination of attractively valued equities, inflation-sensitive assets, short-duration fixed income and targeted downside protection provides a robust framework for achieving the Fund's long-term return objective while preserving resilience across a wide range of economic and market outcomes.
